TABLE OF CONTENTS

To the memory of Giovanni Sacchi Landriani 1

Preface 3

Invited lectures

The *p*- and *h-p* version of the finite element method, An overview
I. Babuška and M. Suri 5

Chebyshev collocation solutions of flow problems
M.O. Deville 27

Spectral simulation of an unsteady compressible flow past a circular cylinder
W.-S. Don and D. Gottlieb 39

Propagation of error into regions of smoothness for non-linear approximations to hyperbolic equations
R. Donat and S. Osher 59

A high-order Lagrangian-decoupling method for the incompressible Navier–Stokes equations
L.-W. Ho, Y. Maday, A.T. Patera and E.M. Rønquist 65

Optimal error analysis of spectral methods with emphasis on non-constant coefficients and deformed geometries
Y. Maday and E.M. Rønquist 91

Iterative solvers by substructuring for the *p*-version finite element method
J. Mandel 117

The Chebyshev multidomain approach to stiff problems in fluid mechanics
R. Peyret 129

Lax-stability of fully discrete spectral methods via stability regions and pseudo-eigenvalues
S.C. Reddy and L.N. Trefethen 147

Dispersion-bounded numerical integration of the elastodynamic equations with cost-effective staggered schemes
P. Šguazzero, M. Kindelan and A. Kamel 165

Vortex structure and dynamics in turbulence
Z.-S. She, E. Jackson and S.A. Orszag 173

The *p*- and *h-p* versions of the finite element method in solid mechanics
B.A. Szabo 185

Shock capturing by the spectral viscosity method
E. Tadmor 197

Spectral methods for simulations of transition and turbulence
T.A. Zang 209

Section 1. Algorithms for incompressible Navier–Stokes equations

A spectral method for time modulated Taylor–Couette flow
C.F. Barenghi 223

Spectral methods for the Stokes problem in stream-function formulation
C. Bernardi, G. Coppoletta, V. Girault and Y. Maday 229

A collocation method based on the influence matrix technique for Navier–Stokes problems in annular domains
A. Chaouche, A. Randriamampianina and P. Bontoux 237

A nonlinear Galerkin method for the Navier–Stokes equations
F. Jauberteau, C. Rosier and R. Temam 245

A three-dimensional pseudo-spectral algorithm for the computation of convection in a rotating annulus
P. Le Quéré and J. Pecheux 261

Numerical simulation of the regularized driven cavity flows at high Reynolds numbers
J. Shen 273

Section 2. Multigrid and preconditioning methods

Algebraic spectral multigrid methods
W. Heinrichs 281

Theoretical analysis of some spectral multigrid methods
R. Muñoz 287

On the spectrum of the iteration operator associated to the finite element preconditioning of Chebyshev collocation calculations
P. Francken, M.O. Deville and E.H. Mund 295

Iterative methods with spectral preconditioning for elliptic equations
H. Guillard and J.A. Desideri 305

On the eigenvalues of second-order spectral differentiation matrices
H. Vandeven 313

Section 3. Domain decomposition, spectral elements, *h-p* finite elements

The *h-p* version of the boundary element method with geometric mesh on polygonal domains
I. Babuška, B. Guo and E.P. Stephan 319

A hierarchic family of conforming finite elements for the solution of plate bending problems
C. Chinosi, G. Sacchi and T. Scapolla 327

Pseudospectral multi-domain method for incompressible viscous flow computation
A. Farcy and T. Alziary de Roquefort 337

Coupling of two-dimensional hyperbolic and elliptic equations
F. Gastaldi, A. Quarteroni and G. Sacchi Landriani 347

A Legendre spectral element method for simulation of unsteady incompressible viscous free-surface flows
L.-W. Ho and A.T. Patera 355

Spectral element–Fourier methods for incompressible turbulent flows
G.E. Karniadakis 367

Pseudospectral matrix element methods for flow in complex geometry
H.C. Ku, T.D. Taylor and R.S. Hirsh 381

Spectral domain decomposition techniques for viscous incompressible flows
T.N. Phillips 389

Section 4. Algorithms for compressible Navier–Stokes equations and hyperbolic problems

Fourth order schemes for the heterogeneous acoustics equation
G. Cohen and P. Joly 397

Pseudospectral simulation of compressible magneto-hydrodynamic turbulence
R.B. Dahlburg and J.M. Picone 409

A Hamiltonian explicit algorithm with spectral accuracy for the 'good' Boussinesq system
J. De Frutos, T. Ortega and J.M. Sanz-Serna 417

Calculations of non-Boussinesq convection by a pseudospectral method
J. Frölich and R. Peyret 425

A semi-implicit collocation method: Application to two-dimensional compressible convection
S. Gauthier 435

Section 5. Approximation of problems in unbounded domains

Truncation versus mapping in the spectral approximation to the Korteweg–De Vries equation
N. Bressan and D. Pavoni 443

Laguerre spectral approximation of elliptic problems in exterior domains
O. Coulaud, D. Funaro and O. Kavian 451

Pseudospectral methods with open boundary conditions for the study of atmospheric wave phenomena
C.E. Wasberg and Ø. Andreassen 459

Spectral methods and mappings for evolution equations on the infinite line
J.A.C. Weideman and A. Cloot 467

Section 6. Parallelism in high order methods

Analysis and application of a parallel spectral element method for the solution of the Navier–Stokes equations
P.F. Fischer 483

Pseudospectral methods on massively parallel computers
R.B. Pelz 493
